object

```
f = new File()
```

- getters
- setters
- static methods

```
class File {  
    private String path;  
    String getPath() {  
        return this.path;  
    }  
}
```

```
class File {  
    private String path;  
    void setPath(String p) {  
        this.path = p;  
    }  
}
```

- simpler
- thread-safe
- side-effect free
- failure atomicity
- easier to cache
- no NULL
- no identity mutability

```
class FileUtils {  
    static String read(File f);  
}
```

```
class File {  
    private final String path;  
    String content() {  
        // read and return  
    }  
}
```
